# Seven Ideas that Shook the Universe 

JOHN BARRICK OFFICE 106
TOM EMMONS OFFICE 107
Seven Ideas that Shook the Universe (Physics 11030) is an introductory science course designed to meet the general science requirement (Basic Sciences LER) for most students at Kent State University. It is a course which serves as a foundation for other scientific courses because it is the study of the rules which govern our physical universe.

Students attend three 50 minute or two 75 minute lectures each week for 15 weeks. At the end of the first five weeks, Exam I is administered with 33 multiple choice questions. At the end of the 10th week, another 33-question exam is given and the comprehensive final exam at the end of the course has 34 questions. This gives a total of 100 questions. The grade is determined solely by these exams using the following 10\% scale:

| Total questions correct out of all three exams | Course Grade |
| :---: | :---: |
| $90-100$ | A |
| $80-89$ | B |
| $70-79$ | C |
| $60-69$ | D |

Basic Grading Scale for Seven Ideas Course
Based on over 30,000 students, who took this course between 1981 and 2003 the average grade was 74 (C).

In order for students to check their progress, they are strongly encouraged to answer the questions in the Seven Ideas Workbook before answers are given in class. To further help the student, sample exam questions are included at the end of the Supplementary Notes. Answers to the self-evaluation questions in the Workbook are also provided at the web site as are additional interactive sample exams.

The lectures have been recorded on audio cassettes. If a student misses a class and is interested in borrowing one of these cassettes, arrangements can be made with his or her instructor.

Because of the large number of students taking this course, we are able to provide additional help sessions arranged each semester. The schedule for these can be obtained from the instructor. In addition, students with special needs can obtain additional assistance through Student Disability Services.

Example of University Class Syllabus
Please make adaptations as necessary for your program.

Monday, Wednesday, and Friday Classes

| S. <br> Notes <br> Chap | Text <br> Pages | Class <br> Meeting | Idea No. | Lecture |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 2-7 | 1 |  | Introduction |
| 2 | 8-22 | 2 |  | Scientific Method and Space |
| 3 | 8-22 | 3 |  | Time, and Matter |
| 4 |  | 4 |  | The Earth and the Observer's Sky |
| 5 | 23-31 | 5 |  | Celestial Sphere and Copernican Theory |
| 6 | 31-37 | 6 | \# 1 | Heliocentric Theory |
| 7 | 38-41 | 7 |  | Planetarium |
| 8 | 42-50 | 8 |  | The Planets and Kepler's Laws |
| 9 | 56-60 | 9 |  | Uniform Motion and Relative Velocity |
| 10 | 67-69 | 10 |  | Acceleration |
| 11 | 61-81 | 11 |  | Velocity Time Graphs |
| 12 | 206-215 | 12 |  | Isotropic Property of Space and Force |
| 13 | 81-93 | 13 | \#2 | Newton's Laws |
|  |  | 14 |  | Review for Exam |
|  |  | $\underset{2}{\text { Monday Oct. }}$ |  | Exam I 33 questions multiple choice Chapters 1-13 |
| 14 |  | 16 |  | Math Examples and Newton's Laws |
| 15 |  | 17 | \#3 | Circular Motion |
| 16 | 98-101 | 18 |  | Work and Energy |
| 17 | 116-120 | 19 |  | Kinetic and Potential Energy |
| 18 | 101-103 | 20 |  | Heat and Temperature |
| 19 | 104-116 | 21 | \#4 | Conservation of Energy |

| 20 | 121-136 | 22 |  | Absolute Zero and Entropy |
| :---: | :---: | :---: | :---: | :---: |
| 21 | 136-161 | 23 |  | Transfer of Heat |
| 22 | 136-161 | 24 |  | Phases of Matter |
| 23 |  | 25 |  | Pressure |
| 24 |  | 26 |  | Nature of Liquids and Gases |
|  |  | Monday Oct. $30$ |  | Exam II 33 questions multiple choice Chapters 14-24 |
| 25 | 175-183 | 28 |  | Introduction to Waves Part I |
| 25 | 175-183 | 29 |  | Introduction to Waves Part II |
| 27 | 183-185 | 30 |  | Electromagnetic Waves |
| 28 |  | 31 |  | The Electromagnetic Spectrum |
| 29 |  | 32 |  | Coherent Light and Laser |
| 30 |  | 33 |  | Reflection, Transmission and Absorption |
| 31 |  | 34 |  | Phosphoresence, Fluorescence, Doppler Effect |
| 32 | 229-234 | 35 |  | Big Band Theory, Refraction |
| 33 | 237-240 | 36 |  | Diffraction, Polarization, Interference |
| 34 | 220-229 | 37 | \#6 | Photoelectric Effect and Bohr Theory |
| 35 | 240-257 | 38 |  | Ultraviolet Catastrophe and Quantum Theory |
| 36 | 188-206 | 39 |  | Matter Waves and Uncertainty Principle |
| 37 | 262-280 | 40 | \#5 | Michelson Morley Experiment and Relativity |
| 38 |  | 41 | \#7 | Nuclear Physics and Conservation Laws |
|  |  | 42 |  | Review for Final |
